

Dear Senate Majority Leader Reid and Members of the U.S. Senate

As American business leaders, we urge you to continue work on comprehensive energy and climate legislation and to help put the efforts by Senators Kerry, Graham and Lieberman back on track.

A carefully constructed climate and energy bill will spur a new energy economy and with it create millions of new American jobs, many in struggling communities across the country. At the same time, it will enhance our national security by making America more energy independent.

Today, the United States is falling behind in the global race to lead the next global industrial revolution. US businesses need strong policies and clear market signals to deploy capital, harness innovative technologies, and compete in the global marketplace.

We commend Senators Kerry, Graham and Lieberman for their months of work and commitment to developing a framework that enjoys unprecedented business support.

We have an historic opportunity to finally enact measures that will break our dependence on foreign oil, help create jobs, and increase energy independence. The policy framework is in place and businesses are ready for action.

Every day the Senate fails to pass comprehensive climate and energy legislation is a day our economy falls another step behind and delays our ability to create millions of new American jobs. America's energy future is not a partisan issue. Now is the time to bring the parties together and finish what we started.

Sincerely,

A.C.E. Ambiental, LLC
